

Introduction to the R Language

Control Structures

Roger Peng, Associate Professor Johns Hopkins Bloomberg School of Public Health

Control Structures

Control structures in R allow you to control the flow of execution of the program, depending on runtime conditions. Common structures are

- · if, else: testing a condition
- for: execute a loop a fixed number of times
- while: execute a loop while a condition is true
- repeat: execute an infinite loop
- break: break the execution of a loop
- next: skip an interation of a loop
- return: exit a function

Most control structures are not used in interactive sessions, but rather when writing functions or longer expresisons.
